

Abstract

The invention relates to an identification card holder (2), on the front side of which a replaceable identification card (1) can be placed. A spring-loaded yo-yo (5) is fastened and positioned on the reverse side of the holder (2), such that the yo-yo (5) remains partially or completely invisible as the card, along with its holder, is viewed from the front side. As the yo-yo is integrated with the holder, the result will be a small-sized, readily portable, and easy-to-handle assembly, which can be distanced from a bearer to the proximity of a code reader for an electric lock without releasing the suspension.
